

PENTAVALENT
in pursuit of innovation

PENTAVALENT BIO SCIENCES

2024

OUR GOAL

At Pentavalent, we are committed to addressing critical health challenges by developing innovative IVD markers for infectious diseases, inflammation, cardiac markers, and cancer. Our innovative technologies are designed to revolutionize diagnostics by making them more accessible and affordable. These advancements aim to significantly improve healthcare outcomes and save lives.

WHAT WE OFFER

Pentavalent offers high-quality reagents and markers for rapid tests and ELISA, including recombinant proteins, monoclonal and polyclonal antibodies, enzymes, and cytokines for infectious diseases, cancer, and cardiac markers, ensuring accurate diagnostics with high sensitivity and specificity.

WELCOME MESSAGE

Welcome to our innovative solutions hub, where cutting-edge technology meets precision and expertise. Through the use of recombinant DNA and genetic engineering, we have developed robust prokaryotic and eukaryotic expression systems. Our expertise in purifying proteins from these systems enables us to create high-quality diagnostic raw materials. Since 2020, we have established platforms for monoclonal antibody development using hybridoma technology and have mastered the conjugation platform using colloidal gold, HRP, FITC, and latex beads to provide tailored solutions to meet customer-specific needs.

Pentavalent is committed to further diversifying its range of raw materials. We are continuously investing in R&D projects to meet the evolving demands of general health management and market trends. Our future offerings will include new and optimized raw materials such as Malaria, cTnI, cTnT, Influenza A, Influenza B, CRP, Typhoid, Leishmaniasis, Filariasis, Leptospirosis, Scrub Typhus, cytokines, growth factors, and enzymes. Additionally, we are expanding our diversification efforts into the animal and agricultural sectors to address a broader spectrum of needs and applications.

VISION

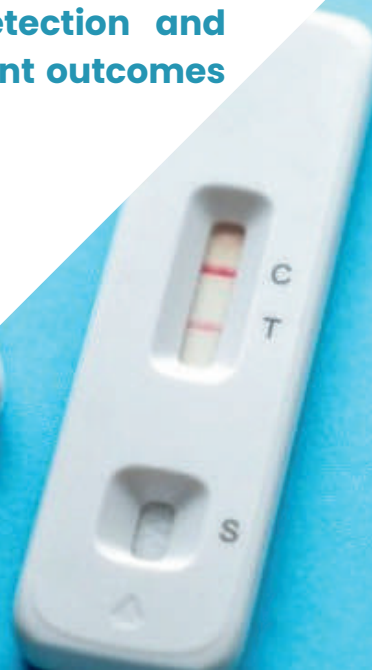

At Pentavalent, we are committed to revolutionizing India's IVD industry with premium diagnostic materials, including recombinant proteins and antibodies. We focus on infectious diseases, inflammation, cardiac markers, and cancer to enhance diagnostic accuracy and accessibility.

MISSION

We envision a future where our innovative solutions seamlessly integrate diagnostics into healthcare. By anticipating needs and developing advanced products, we aim to simplify and enhance the diagnostic process, making it more accurate and accessible for all.

VALUES

We deliver advanced diagnostic markers that provide accurate and reliable results, seamlessly integrating into healthcare workflows. Our user-friendly and affordable solutions ensure wide accessibility, supported by comprehensive training and responsive service. By fostering partnerships and leveraging digital health integration, we enhance early detection and personalized treatment, ultimately improving patient outcomes and advancing precision medicine.

PRODUCT

PORTFOLIO

INFECTIOUS DISEASES

We offer diagnostic markers for HIV, HCV, HBsAg, and Syphilis, ensuring precise detection and effective management.

TROPICAL DISEASES:

Our diagnostics cover Malaria, Chikungunya, and Dengue, providing accurate and timely results.

CARDIAC MARKERS:

Key markers include Troponin I and Troponin T for reliable cardiovascular health assessment.

INFLAMMATION MARKERS:

C-Reactive Protein (CRP) is available for detecting and managing inflammation.

CYTOKINES:

We offer various cytokines for research and diagnostics

CONTROL ANTIBODIES:

Available from Goat, Rabbit, and Chicken to ensure assay accuracy.

OUR SERVICES

CUSTOM ANTIBODY DEVELOPMENT:

Custom Antibody Development:

We provide custom monoclonal and polyclonal antibodies tailored to your research and diagnostic needs, ensuring high quality and reliability.

RECOMBINANT PROTEIN CLONING AND EXPRESSION:

Our service offers recombinant protein cloning and expression in prokaryotic systems, delivering high-quality proteins for various applications.

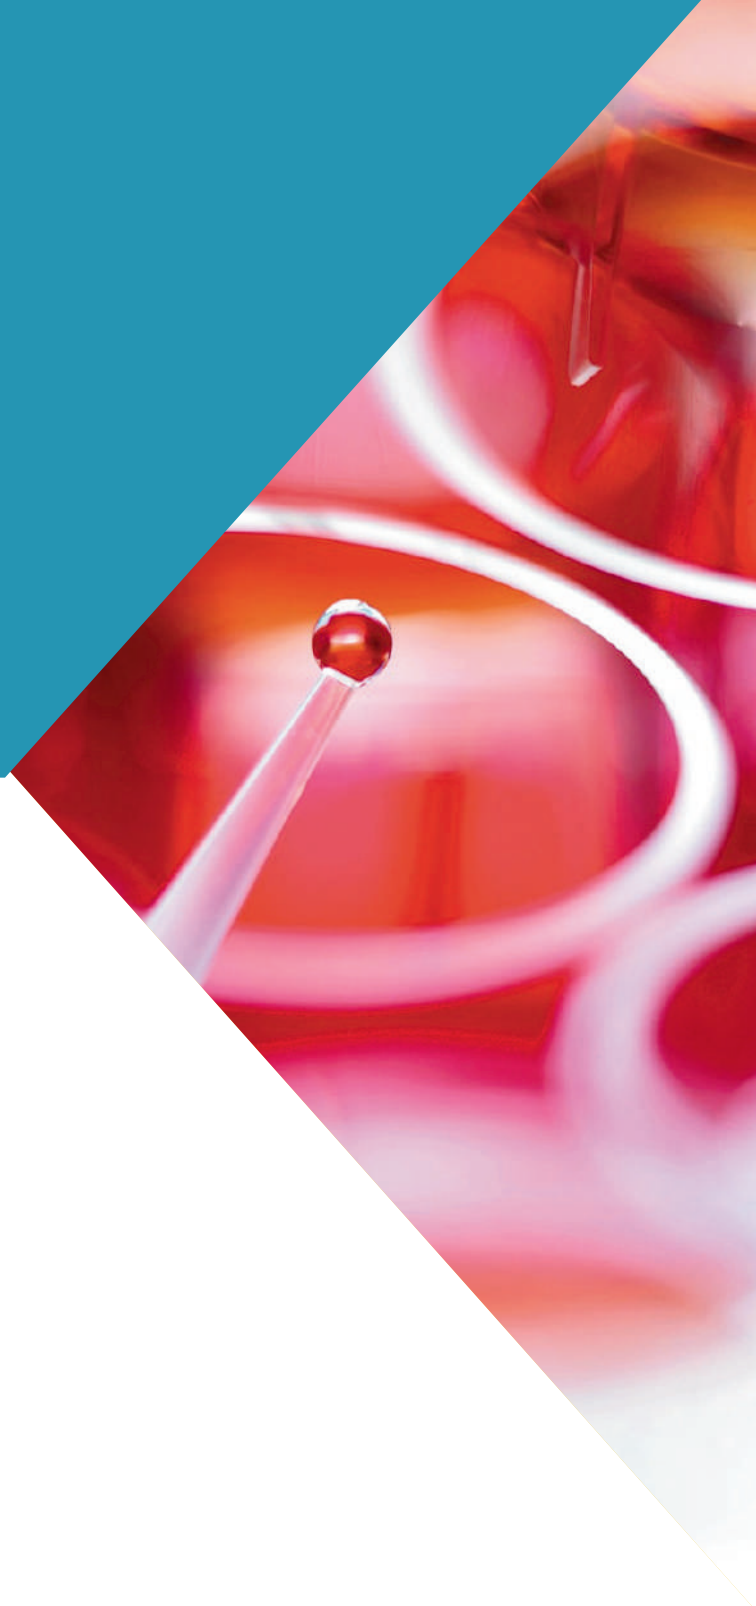

CONJUGATION PLATFORM:

We offer versatile conjugation services, including colloidal gold, latex beads, HRP, and various fluorophores, to enhance diagnostic assays and research.
